## Professional Summary

---

Entry-level Java Developer skilled in Core Java, OOP, Spring Boot, JDBC/Servlets, and SQL/MySQL, with hands-on experience building full-stack web applications using Java, React, and MySQL. Strong understanding of MVC architecture, RESTful API design, and secure authentication. Eager to contribute to scalable backend systems and clean, maintainable code in Agile teams.

## Technical Skills

---

**Programming Languages:** Java

**Web:** HTML5, CSS3, basic JavaScript, React

**Tools:** Git, GitHub, Maven, IntelliJ/Eclipse, Postman

**Frameworks:** Spring Boot, Hibernate

**Databases:** MySQL

**Concepts:** OOP, Collections, Exceptions, Multithreading basics, REST concepts, MVC, JDBC, Agile fundamentals

## Projects

---

### Food Delivery System | Java, JDBC, MySQL, HTML/CSS

- Designed and implemented an online food ordering system with customer, restaurant, and admin modules.
- Built database schema with normalized tables for orders, menus, and payments.
- Integrated JDBC with MySQL to enable CRUD operations on orders and menus.
- Developed authentication and role-based access to improve data security.
- Reduced order retrieval time by 25% using optimized SQL queries.
- Followed Agile methodology for iterative development and testing.
- Built and deployed using Maven for dependency management and project structure.
- Version-controlled source code using Git with feature branches and code reviews.

### E-commerce Shopping Application | Java, Spring Boot, React, MySQL

- Developed a full-stack e-commerce web app for product browsing, cart management, and secure order placement.
- Built RESTful APIs in Spring Boot for product management, authentication, and order processing.
- Created a responsive React frontend with dynamic routing, reusable components, and real-time UI updates.
- Integrated a secure payment gateway to enable smooth online transactions.
- Implemented JWT-based authentication and role-based access control for users and admins.
- Configured MySQL database for efficient management of product catalogs, orders, and user information.
- Integrated frontend and backend APIs to ensure seamless communication and user experience.
